

## Offices with a passive house certificate (The Bauland House in Fotliget, Hungary)

Product:  
**Neopor®**

Application:  
**Wall insulation**

At Fotliget, a few kilometers east of the Hungarian capital Budapest, passive house standard office and business premises have been built in collaboration with the investor Bauland. It comprises an area of around 1100 square meters on three floors for offices, shops and restaurants. Insulation using Neopor® and additional technologies such as a heat pump and solar energy should ensure that there are no heating costs. The energy concept was developed by Luwoge consult. This project also shows for business premises that the investor can profit in the long term from a low energy standard. The Passivhaus-Institut in Darmstadt, Germany, has certified the house to 1.5-liter standard.
